

- Description of Program

- Freddit -- The fake Reddit app. You want to look at amazing pictures of earth? Browse r/EarthPorn and be amazed by all the great photographers who go outside so you don't have to. Does the sun burn your skin? We got you covered with our dark theme, also maybe save on your battery life (legally we can't say for sure, as we haven't tested anything). But wait there's more! Fancy features like being able to change the subreddit that gets loaded in make this app stand out (may come with bugs, but hay protein).
